

5 TITLE OF THE INVENTION

COMBINATION CALANDER AND ADVERTISING FORMAT

10

Field of the Invention

15 This invention is directed to a calendar and advertising format. More particularly, this invention is directed to a format that contains graphic, printed, artistic and photographic advertising matter combined with monthly calendars spanning a calendar year.

20

Background of the Invention

25 Monthly calendars containing advertising matter are known. These calendars are generally provided in the form of a plurality of single pages, each page containing the calendar for a single month and which can include a few lines of printed advertising matter to identify the donor. When one month ends, the page containing that month can be either turned over or torn off and discarded to expose the calendar for the next month which contains the same printed advertising matter.

30

Another type of known calendar is also provided in the form of single pages with each page containing the calendar for a single month and a few lines of printed matter to identify the donor. The reverse side of the page containing the calendar can contain additional printed advertising matter or an artistic rendering, a reproduction of art, a photograph, and the like. The

5 pages are normally joined together so that when the calendar page is turned, there is exposed both the reverse side of the calendar page and the page containing the next calendar month.

These types of calendar formats are limiting since they typically
10 display only a single advertisement, artistic rendering, reproduction of art, photograph, and the like, with a single exposed calendar month.

Summary of the Invention

15 The combination calendar and advertising format of this invention generally comprises: a plurality of sheets of printable stock paper; a plurality of panels transversely defined on each of said sheets; a plurality of printed matter and graphics contained on the upper face of each of said panels; and, a monthly calendar contained on at least one of said panels.

20 In one embodiment, the sheets are joined together at one end and are provided with means to vertically suspend the format for display.

In another embodiment, each of the panels contains a monthly
25 calendar as well as printed matter and graphics.

In a further embodiment, the printed matter can include commercial and/or personal advertising copy such as business advertisements promoting clothing, food, products, services, and the like, as well as events, messages,
30 quotations, slogans, and the like.

In still another embodiment, the graphics can include artistic renderings, art reproductions, photographs, trademarks, service marks, and the like.

Brief Description of the Drawing

The combination calendar and advertising format of the invention is further illustrated in the accompanying drawing wherein:

10

Fig. 1 is a perspective view of a typical prior art calendar;

Fig. 2 is a side view of a partially expanded combined calendar and advertising format of the invention;

15

Fig. 3 is a plan view of the combined calendar and advertising format of the invention; and,

Fig. 4 is an exaggerated plan view illustrating a typical panel of the combined calendar and advertising format of the invention.

20

Detailed Description of the Drawing and the Invention

The combined calendar and advertising format of the invention will become more apparent from the ensuing description when considered together with the accompanying drawing wherein like reference numerals and letters denote like parts.

25

Fig. 1 depicts a typical prior art calendar, generally identified by reference numeral 10, made up of separate sheets of printable paper 11 with the bottom 13 of the top sheets 12 joined to the top 14 of the next, succeeding sheets 15 such as by use of spiral connectors 16. The top sheets 12 are generally the reverse sides 17 of the next, succeeding sheets 15 and typically contain graphics such as artistic illustrations such as familiar

30

5 street scenes, art reproductions such as religious compositions, landscapes,
and the like, photographic reproductions such as animals and animal
groupings, landscapes, seascapes, and the like, indicated by free form
outline 18. The exposed succeeding sheets 15 typically contain a current
monthly calendar 19 and can include printed matter such as advertising
10 identifying the donor such as, for example, a business such as a funeral
home, a plumber, and the like, or services such as accountants, a house of
worship, legal groups, medical groups, and the like, as indicated by wavy
lines 20.

15 Figs. 2, 3 and 4 illustrate a preferred embodiment of the combined
calendar and advertising format of the invention. As can be seen in Figs. 2
and 3, the combined calendar and advertising format of the invention,
generally identified by reference numeral 30, is composed of a plurality of
separate, elongated, generally rectangular shaped sheets 31 of printable
20 stock, each sheet having a top 32, a bottom 33, opposed sides 34 and 35,
an upper face 36 and a reverse face 37. The printable stock that can be
used is one that is commercially available and that will readily accept printed
matter and/or graphics. The printable stock can be from about 20 pound
weight to about 40 pound weight and can be finished, glossy, matte or
25 unfinished provided that it is capable of accepting printed matter and/or
graphics.

The plurality of sheets 31 are preferably joined together at one end
such as at their tops 32 by conventional means such as adhesives, staples, a
30 tape binding, or the like as indicated at 38 and can be provided with means
such as a hook, string, and the like (not shown) so that the format can be
suspended for display against a flat, vertical surface such as a wall, door,
and the like. The sheets are preferably joined together so that the uppermost
sheet can be torn off to expose the next succeeding sheet.

Each sheet is divided into a plurality of transversely defined panels, all of which contain printed matter, graphics or combinations of printed matter and graphics. Preferably, each sheet is divided into three such panels, A, B and C (Fig. 3) with at least one of the panels containing a monthly calendar.

10 More preferably, each of the three panels contains a monthly calendar; namely, a calendar for a prior month, a calendar for the current month and a calendar for the next month, as well as printed matter and graphics.

Depending upon the number of panels that each sheet is divided into, a sufficient number of sheets are provided so that the monthly calendars

15 contained on the sheets collectively span a calendar year.

Fig. 4 illustrates a typical panel, such as panel B (Fig. 3) of the combined calendar and advertising format of the invention. As can be seen, this panel, B, contains a calendar 39 and a combination of printed matter

20 shown by wavy lines 40 and graphics shown by a free form outlines 41.

As stated above, illustrative printed matter that can be contained on the panels of the invention format can include commercial and/or personal advertising copy such items as business advertisements promoting clothing,

25 food, products, services, and the like, as well as events, messages, quotations, slogans, and the like. Similarly, illustrative of the graphic matter that can be contained on the panels of the invention format are such items as artistic renderings, art reproductions, photographs, trademarks, service marks, and the like.

30 In a most preferred embodiment, the printed matter contained on the panels of the invention format is in the form of commercial advertising identifying dining and eating establishments such as catering halls, fast food chains, restaurants, and the like, and the graphic matter contained on the

5 panels of the invention format is in the form of artistic renderings and
photographs depicting foods, meals, prepared dishes, and the like.

Although the invention has been described with reference to preferred
embodiments as well as with particularity and in some detail, it will be
10 appreciated by those skilled in the art that the preferred embodiments are
illustrative of and not limitative of the invention and that changes and
modifications can be made therein without departing from the scope and
spirit of the invention.
